Understanding and Improving Your Credit Score

Your credit score has a huge impact on some of the biggest aspects of your adult life. You'll likely need a decent score if you want to rent, lease or finance a car, open a credit card account, and of course, buy a home. To avoid making costly mistakes that harm your credit, you have to first understand how the process works.

When lenders and credit issuers evaluate an application, they usually want both your credit report and credit score. The score is a mathematical calculation based on the information found on your credit report. The score represents how much of a credit risk you may be to lenders. You have probably heard your credit score referred to as your FICO score, because the software used to calculate it was developed by Fair, Isaac, and Company, or FICO. All the major credit reporting companies use FICO scores, but sometimes different sets of informa-

tion on their reports. FICO scores range from 300 (the highest risk) to 850 (the lowest risk), and that score depends on many factors. The major factors are the following:

✓ **Bill payment history.** If you consistently pay your bills on time, that will be reflected in a higher, less-risky score. But if you've been late in payments, had debt sent to collections, filed for bankruptcy, etc., that will factor into a lower, higher-risk score.

✓ **Your outstanding debt.** This is your total debt, including mortgage, car loans, student loans, credit cards, home-equity lines of credit, and any other type of loan reported to a credit agency. And while it may seem like lower balances will always result in better scores, a very important factor is how much available credit you don't use. Those who use credit sparingly — about 10% of allowed and no more than 30% — will have

Do You Have Too Much Debt?

Various rules of thumb exist to help determine when debt levels are excessive. The problem with rules of thumb, however, is they don't take into account your unique circumstances. Look for these signs that your debt level may be getting too high:

- ✓ **You have no money left over at the end of the month.** If you have nothing left to save after paying your bills every month, your debt may be too high.
- ✓ **You've reached your maximum credit limit.** If you've maxed out your credit card limits or are considering obtaining new cards for additional credit, your debt may be getting out of hand.
- ✓ **You're only making minimum payments.** Minimum payments on credit card debt are so low, it can take decades to pay off the debt.
- ✓ **You don't have an emergency fund.** Ideally, you should set aside three to six months worth of living expenses in case of emergencies, such as a job loss or major home or car repair. ○○○

the highest credit scores.

✓ **How long you've had a credit history.** The longer you have had and used credit, the higher your score. Even better is if you have established long-term credit with the same set of lenders.

✓ **Different types of credit.** If you have a mix of fixed-payment loans and revolving credit, you will have a higher score to reflect your variety of credit.

✓ **Hard credit pulls.** If you have applied for credit several times in a short period of time, that will signal to lenders you may be a risky option. This risk results in a lower FICO score. However, multiple applications for a specific type of credit in a short time frame does not have the same negative effect.

Now that you know what your credit score is based on, it is easier to understand why those factors are important to lenders. Applicants with credit scores of 720 and higher receive the best deals. If your score is below that, there are ways to improve it:

✓ Review your credit report to stay updated and catch any mistakes. Your score is based on information on your credit report, so any errors on the report could be costly for you even if you actually have a good credit history. Get copies of your report from the three main reporting agencies (Experian, TransUnion, and Equifax) and check each for mistakes. You are entitled to one free report from each company every year.

✓ Pay all your bills on time. Check to see if your credit report shows any late notices. If you have an otherwise good credit rating, you might be able to get the lender to remove the notice.

✓ Reduce your credit utilization rate. Your score is higher when

How to Use P/E Ratios

The price/earnings (P/E) ratio is the price you pay for \$1 of a company's earnings. For example, if a company reports basic or diluted earnings of \$2 per share and the stock is selling for \$20 per share, the P/E ratio is 10 (\$20 per share divided by \$2 of earnings per share).

This ratio helps you determine if a stock is over or undervalued, compare companies in the same industry, and compare the return you are actually earning from the company compared to other investments, such as bonds or real estate.

Here's how it works. Both company A and B are selling for \$50 per share. Company A has reported earnings of \$10 per share and company B has reported earnings of \$20 per share. Company A's P/E ratio is 5, while company B's is 2.5. Company B is cheaper and is providing twice the earning power because for the same share price, an investor is getting \$20 of earn-

ing as opposed to \$10 of earnings.

There are also variances in P/E ratios by industry, because there are different expectations for different types of businesses. Technology companies typically sell at larger P/E ratios, because their growth rate and earnings are higher.

The bottom line is you have to do your homework. If you want to buy a stock because it has an attractive P/E ratio, make sure you know why. It may be a great stock to purchase and is just undervalued, but make sure you know if the company is losing business or is poorly managed. It may also be that the entire industry is weak. Don't just buy a stock because it's cheap. Many investors also use the price/earnings to growth ratio, also known as the PEG ratio, because it also factors in the growth rate of a company.

Please call if you'd like to discuss P/E ratios in more detail.

○○○

your debt is lower as a percentage of your available credit. Pay down whatever you can and stop using credit for large purchases. If you cannot pay it down right away, ask your lender to increase your available credit. This way, your outstanding debt will be a lower percentage of available credit...but you will need to resist the temptation to draw on any of that newly available credit. Make sure you never use more than 50% of available credit.

✓ Keep credit card accounts open. This may seem counter-intuitive, because once you've paid off a balance you probably want the satisfaction of closing it out. But when you close an account, you no longer have that available credit to count toward your utilization percentage. If you have more than five

credit cards, close the newest ones so your long-term credit relationship stays in the report.

✓ Consider installment loans if you only have revolving credit. Fixed-payment loans like a car loan or mortgage will increase the variety of credit in your report, and you will be rewarded in your FICO score.

✓ Avoid asking for more credit as much as possible. Inquiries about more debt will show up in your credit file like hard pulls and will lower your credit score.

Your credit score can have a significant impact on the cost of any debt you incur. If you'd like to discuss this topic in more detail, please feel free to call. ○○○

How Much Is Too Much to Pay for a House?

There are a few situations in life when it seems like money should be no object: weddings, birthdays...and purchasing a dream home. But in reality, a house is generally the largest investment people make over the course of their lifetime, and there is real financial danger in being blind to important factors when looking at a beautiful home. Before you let yourself fall in love with the house you're considering, think about the location, comparable houses, area trends, and a realistic budget to see if it's worth the asking price.

Location, location, location. Yes, you fall in love with the house itself, but much of its value has more to do with where it is than the high-end finishes inside. Ask yourself the following questions:

- How attractive is the area?
- How easy is it to get around?
- What is the crime rate?
- How are the schools?

This is also where the "buy the worst house on the block" adage comes in. It's not that you must buy an ugly house, but recognize that the house can change, but the location won't. So, you may as well get a bargain in a great location instead of paying for a premium house.

Sometimes a location that seems unappealing is actually undergoing positive change. It is good to see what is going on in the area that could affect the value of the home. Consider current trends in the neighborhood (you may need the help of a real estate professional) to try to determine how much value the property will hold. Ask yourself the following questions, for starters:

- ✓ Are young, upwardly mobile families starting to move into this area?
- ✓ Are new roads being built or existing highways being expanded?

✓ How is the economy? Consider national, regional, and local confidence in the economy.

✓ Is it a buyer's market with too much supply and not enough demand driving prices down, or a seller's market that may result in aggressive bidding wars over most properties?

If you've determined the house is in the location that is best for you, you still need to figure out if the dollar amount per square foot is reasonable. What are comparable houses selling for? A good real estate agent who is familiar with the neighborhood can help you figure out if the house is overpriced for the area by checking recently sold homes with similar square footage and features.

It can be difficult to determine an accurate and future value of a home, but it's a bit easier to figure how much you can afford to pay for a house. Your lender will set a ceiling for you by determining how much they will approve for borrowing based on your income-to-debt ratio and other financial risk factors. But just because you may be approved for a large amount does not mean you should spend it. Consider how those mortgage payments will factor in with everyday expenses and your lifestyle, and don't forget you will need an emergency fund for costly home repairs. Before you fall in love with a house you

may not be able to afford, set a budget that works for your circumstances and house shop in that range.

Nowadays with sites like Zillow and Realtor.com, it can be hard to only look within your means. Scrolling through listings on your couch is much easier than going out to tour each one with your agent, and the pricey homes tend to have lovely photographs. So don't underestimate the pull of a seemingly perfect but over-budget home. HGTV shows are as popular as they are for this very reason: we love beautifully designed (and expensive) houses. If you find yourself having a hard time resisting the premium priced house, consider your overall financial objectives.

If you buy the most expensive house you can get, will that stall your savings for your children's education or delay your retirement? Are you wiping out your savings to make a massive down payment? Keep in mind you can always stay a few years to build up equity and then sell up...or make enough changes to a house to turn it into your dream home. A financially practical, comfortable house will always beat out a mansion that leaves you house-poor.

Please call if you'd like to discuss this topic in more detail.

New Jersey Estate Tax Repeal

In October 2016, New Jersey Governor Chris Christie signed a transportation bill that included a repeal of the New Jersey Estate Tax. The bill was known more for its 23 cent per gallon increase to the gas tax, but was far-reaching. There were provisions affecting taxes on retirement benefits and the sales tax.

Estate taxes are levied on the transfer of wealth. The federal government and many states impose estate taxes. Historically, many states, including New Jersey, had estate tax laws that were a function of the federal law. In 2001, estates were subject to the federal estate tax to the extent that they exceeded \$675,000. Called the estate tax exemption, this is the amount that can be passed to heirs without being subject to the estate tax. It is also the amount that is subtracted from larger estates before applying the applicable estate tax rate.

In 2001, the Economic Growth and Tax Relief Reconciliation Act (EGTRRA) was passed by the United States Congress and signed by the President, raising the exemption from \$675,000 to \$1,000,000. The law provided annual increases to this amount until, in 2010, the estate tax was repealed. Due to a sunset provision and subsequent negotiations, the federal estate tax came back in to effect in 2011, although with much higher exemptions.

As many states' laws were written, the same exemption applied. If nothing had been done, this would have automatically raised the threshold for state estate taxes. Not wanting to lose that tax revenue, many states quickly "decoupled" their estate tax laws from the federal government's law. Many froze the exemption at the 2002 level of \$1,000,000. New Jersey went a step

further and locked the exemption in at the 2001 level of \$675,000.

Although a "high tax" state, New Jersey had one of the lowest tax rates on gasoline in 2016. Gasoline prices had dropped significantly, hitting a recent low in January of that year. This created a scenario where raising the gas tax would be more palatable to drivers and thus less of a political liability to lawmakers. As negotiations evolved, the bill became broader, affecting retirement and estate taxes. Critics charged that the proposed repeal of the estate tax was a tax cut for the rich, while proponents claimed that it would slow the exodus of retirees to more tax-friendly locales in states like Florida or Arizona.

The repeal of the estate tax was designed to occur in two steps. For those passing away in 2017, the exemption was raised from \$675,000 to \$2,000,000. In 2018, the estate tax does not apply.

The New Jersey Inheritance Tax was unaffected by the legislation. As opposed to the estate tax, which is charged to the estate, the inheritance tax applies to those that inherit wealth, other than the spouse and children.

One of the main objectives of estate planning is to minimize taxes. At a glance, it may seem that for someone with assets exceeding \$675,000 the NJ estate tax repeal would be a good thing. However, we should not make this assumption. Many existing estate documents were written in a way that directs assets valued at the lesser of the New Jersey and federal exemption to the children, with the spouse receiving the remainder. This was sometimes done through the use of an A-B Trust or a bypass trust.

When the New Jersey exemption was \$675,000, this often made sense. However, now that the New Jersey estate tax has been repealed, the lesser of the two is now the federal exemption of \$11.2 million. If a person dies in 2018 with documents set up this way, all assets up to \$11.2 million would pass to the children, with the remainder passing to the spouse. If the estate is valued at less than \$11.2 million, as the vast majority are, this would result in the unintentional disinheritance of the spouse.

With the federal estate tax exemption now at \$11.2 million, very few taxpayers are likely to be affected. As a result, the focus turns to state laws, which can change quickly and often. Twelve states and Washington, DC have an estate tax and six have an inheritance tax. Only Maryland still has both. New York has an estate tax exemption of \$5.25 million.

Law changes require periodic reviews of your estate planning documents. Failure to do so could have significant and negative consequences for your heirs. Your estate planning attorney is your best resource to address this matter. We are happy to discuss this with you as well.

Sincerely,

Christopher M. Trainor
